

A/E Lead Design Build – Exploring Possibilities in DB Procurement

Please join us for an exploration of the A/E lead realm of design-build project delivery, including the benefits and potential risks depending on the project type, market contributors in this space, and examples of successful projects using this approach.

KAI-Design Build and Solutions AEC will share their experiences and invite discussion from owners, contractors and other design build team members on the unique perspectives each bring to the successful execution of a design build project.
